(54) LIGHT EMITTING DEVICE FOR HELMET

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a light emitting device for a helmet, which is simple, lightweight and easy to wear.

SOLUTION: A light emitting device 2 for a helmet 1 comprises a mounting body 2a, a plurality of LED light-emitting elements 2b, a battery and a control portion 2c. The mounting body 2a is fixed by being stuck on an outer periphery side portion of the helmet 1 elastically from the right and left. The LED light-emitting elements 2b are placed on an outer peripheral surface of the mounting body 2a having an appropriate spacing. The battery and the control portion 2c make the LED light-emitting elements 2b blink and emit light. The mounting body 2a is made from plastic material or the like in the shape of letter U whose right and left open are recessed mutually more or less, and provided to hold the outer periphery side portion of the helmet 1 elastically from the right and left. When the mounting body 2a is provided on the helmet 1, the mounting body 2a may be stuck on the helmet 1 by a double-faced tape or the like, or a hook may be provided to the mounting body 2a so that the body 2a can be hooked on an edge of the helmet 1 in order to mount the mounting body 2a on the helmet 1 with reliability and stability.
